XX Detecting Mycobacterium species, involves in vitro amplification of 16S
PT rRNA or DNA encoding RNA in nucleic acid amplification mixture using
PT specific primers, and detecting the amplified nucleic acid.
XX
XX Claim 1; Page 36; 44pp; English.
XX
XX The invention relates to a method of detecting Mycobacterium species,
CC that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
CC encoding 16S rRNA in an in vitro nucleic acid amplification mixture
CC comprising a polymerase, and at least two primers, and then detecting the
CC amplified nucleic acid. The method is relatively simple and useful for
CC detecting the presence of various Mycobacterium species in a biological
CC sample, and thus important for diagnosis of infections resulting from
CC them. The method is especially important for screening opportunistic
CC infections caused by M. tuberculosis or a Mycobacterium other than
CC tuberculosis (MOTT). The present sequence is a PCR primer used for
CC amplifying Mycobacterium 16S rRNA

XX Detecting Mycobacterium species, involves in vitro amplification of 16S
XX rRNA or DNA encoding RNA in nucleic acid amplification mixture using

```

PT specific primers, and detecting the amplified nucleic acid.

PS Claim 1; Page 36; 4pp; English.

XX The invention relates to a method of detecting Mycobacterium species, CC that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA CC encoding 16S rRNA in an in vitro nucleic acid amplification mixture CC comprising a polymerase, and at least two primers, and then detecting the CC amplified nucleic acid. The method is relatively simple and useful for CC detecting the presence of various Mycobacterium species in a biological CC sample, and thus important for diagnosis of infections resulting from CC them. The method is especially important for screening opportunistic CC infections caused by M. tuberculosis or a Mycobacterium other than CC tuberculosis (MOTT). The present sequence is a PCR primer used for CC amplifying Mycobacterium 16S rRNA

PT Mycobacterial sensitivity and drug screening assays - involving release

PT of pre-rRNA by lysis.

XX

PS Example 4; Col 17-18; 50pp; English.

XX

CC This sequence represents a target sequence for mycobacterial probes. This

CC sequence represents a precursor RNA fragment that is released during the

CC method of the invention. The method is for the determination of

CC mycobacterial cell sensitivity to an antimicrobial agent, and comprises:

CC (a) culturing the cells in the presence of the antimicrobial agent; (b)

CC treating the cells by enzymatic or mechanical means to expose the cell

CC membrane to lysis reagents, and contacting the cells with a lysis reagent

CC under conditions such that pre-rRNA is released from the cells but not

CC degraded; and (c) detecting the pre-rRNA with an oligonucleotide probe

CC capable of hybridizing to a region of the pre-rRNA that is not present in

CC mature mycobacterial RNA, where sensitivity to the antimicrobial agent

CC is indicated by an increase or decrease in pre-rRNA levels for cells

CC exposed to the antimicrobial agent compared with mycobacterial cells not

CC exposed to the antimicrobial agent. The lysis method, unlike known

CC methods, results in detectable levels of pre-rRNA

XX

CC The present sequence represents a mycobacterial mature ribosomal RNA

CC target sequence. The present invention describes a method for detecting

CC pre-rRNA in cells of a mycobacterial sample. The method comprises: (a)

CC treating the cells to release pre-rRNA by: (i) pretreating the cells by

CC enzymatic degradation using both lysozyme and protease until their cell

CC walls are rendered porous to expose their cell membranes, making the

CC cells susceptible to lysis; (ii) contacting the pretreated cells with a

CC combination of a magnesium chelator, a nonionic detergent and an anionic

CC detergent; and (iii) heating the cells to 75-99 degrees Celsius until the

CC mycobacterial cells are lysed; and (b) detecting the pre-rRNA using at

CC least one oligonucleotide probe which is capable of selectively

CC hybridizing to a region of the pre-rRNA that is not present in a mature

CC mycobacterial rRNA. The probes can be used to identify many Mycobacterium

CC spp. including M. tuberculosis, M. leprae, M. habana, M. avium, M. bovis,

CC M. lufu, M. paratuberculosis, M. marinum, M. simiae and/or M.

CC intracellulare. The probes may also be used to measure mycobacterial

CC response to inhibitors of RNA and protein synthesis and may therefore be

CC used to screen new antimycobacterial drugs. Mycobacteria have a slow

CC growth rate. By using the probes, drug developers can now identify

CC compounds that are more effective, but less stable than those previously

CC identified

PT Fragments of Corynebacterium 16S RNA - useful as probes and primers for
PT identifying Corynebacterium spp.
XX
PS Claim 2; Page 14; 60pp; French.
XX
CC Fragments covering 90 % of the sequence of 16S ribosomal RNA were
CC amplified from 28 strains of 25 different species of Corynebacterium by
CC PCR using primers specific for eubacteria. The amplification products
CC were sequenced and the sequences were aligned for comparison. It was
CC found that certain regions, i.e. those corresponding to nucleotides 72-
CC 100, 195-215, 466-494, 608-631, 838-853, 859-875 and 1013-1033 in the 16S
CC ribosomal RNA of C. diphtheriae, vary considerably between different
CC species. Probes and primers comprising at least 5 nucleotides from one of
CC these species-specific sequences, including the present sequence, or
CC their complements, are useful to distinguish between different
CC Corynebacterium species. DNA versions of the probes and primers are also
CC included

 Detecting Mycobacterium species, involves in vitro amplification of 16S
 rRNA or DNA encoding RNA in nucleic acid amplification mixture using
 specific primers, and detecting the amplified nucleic acid.
 Claim 1; Page 37; 44pp; English.
 The invention relates to a method of detecting Mycobacterium species,
 that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
 encoding 16S rRNA in an in vitro nucleic acid amplification mixture
 comprising a polymerase, and at least two primers, and then detecting the
 amplified nucleic acid. The method is relatively simple and useful for
 detecting the presence of various Mycobacterium species in a biological
 sample, and thus important for diagnosis of infections resulting from
 them. The method is especially important for screening opportunistic
 infections caused by M. tuberculosis or a Mycobacterium other than
 tuberculosis (MOTT). The present sequence is a PCR primer used for
 amplifying Mycobacterium 16S rRNA

XX
XX The invention relates to a method of detecting Mycobacterium species,
XX that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
XX encoding 16S rRNA in an in vitro nucleic acid amplification mixture
XX comprising a polymerase, and at least two primers, and then detecting the
XX amplified nucleic acid. The method is relatively simple and useful for
XX detecting the presence of various Mycobacterium species in a biological
XX sample, and thus important for diagnosis of infections resulting from
XX the method is especially important for screening opportunistic
XX infections caused by M. tuberculosis or a Mycobacterium other than
XX tuberculosis (MOTT). The present sequence is a PCR primer used for
XX amplifying Mycobacterium 16S rRNA

PT Diagnosing and analyzing autoimmune disease using gene expression
PT profiles and microarray technology, useful for diagnosing and treating
PT rheumatoid arthritis, lupus, fibrositis, osteoarthritis, fibromyalgia and
PT gout.
PS Disclosure; Page; 56pp; English.
XX
XX The invention relates to a novel method for diagnosing and analysing
CC autoimmune disease or arthritides. The method comprises obtaining a
CC patient sample containing mRNA, analysing gene expression using the mRNA
CC that results in a gene expression signature of the mRNA, and using that
CC gene expression signature to diagnose or analyse the autoimmune disease
CC or arthritides in the patient, where gene expression of at least 60% of
CC the genes correlates with that of the gene signature. The invention
CC further comprises: a treatment of rheumatoid arthritis; identification of
CC genes for targeting in the treatment of rheumatoid arthritis in a mammal
CC other than a mouse; diagnosis of rheumatoid arthritis in a mammal; an
CC array or gene chip, specific for rheumatoid arthritis; diagnosis or
CC analyses of autoimmune disease or rheumatoid arthritis; screening the
CC efficacy of a candidate drug in vitro for the treatment of collagen-
CC induced arthritis; and reducing the symptoms associated with collagen-
CC induced arthritis. The compositions of the invention have the following

CC activities: immunosuppressive, antiarthritic, antirheumatic, antiinflammatory, dermatological, and immunomodulatory. The
CC antigenout, antiinflammatory, dermatological, and immunomodulatory. The
CC methods and compositions of the present invention are useful for
CC diagnosing and treating autoimmune disease or arthritides, such as
CC rheumatoid arthritis, lupus, ankylosing spondylitis, fibrositis,
CC fibromyalgia, osteoarthritis, gout, juvenile rheumatoid arthritis, and an
CC immune disease caused by an infectious agent. This polynucleotide
CC represents a DNA sequence relating to the genes used in the analysis and
CC treatment of autoimmune diseases or arthritides. Note: This sequence is
CC not shown in the specification. It has been supplied in an electronic
CC format from WIPO.

PT Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
comprises a nucleotide sequence.
XX
PS Claim 1; SEQ ID NO 1426; Opp; English.
XX
CC The present invention relates to novel DNA and protein sequences which
are associated with carcinomas. The sequences are useful for: (i) for
screening drug candidates; (ii) for screening of bioactive agent capable
of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
a bioactive agent capable of modulating the activity of CAP; (iv) for
evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
(x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
determining Carcinoma Associated (CA) gene copy number. In addition, the
CA genes are useful as DNA vaccines and the CAP are useful as markers of
carcinoma including lymphoma. The present sequence is one such CA coding
sequence. Note: This patent is an equivalent to basic patent
US2002182586A1, for which no sequence data was published

XX
XX  Single exon nucleic acid probes for analyzing gene expression in human
PT  hearts.
XX
XX  Claim 1; SEQ ID NO 6845; 530pp; English.
PS
XX  The present invention relates to single exon nucleic acid probes for
XX  measuring human gene expression in a sample derived from human heart. The
CC  present sequence is one such probe. The probes may be used for
CC  predicting, measuring and displaying gene expression in samples derived
CC  from the human heart via microarrays. By measuring gene expression, the
CC  probes are useful for predicting, diagnosing, grading, staging,
CC  monitoring and prognosing diseases of the human heart and vascular system
CC  e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
CC  congenital heart disease. Note: The sequence data for this patent did not
CC  form part of the printed specification, but was obtained in electronic
CC  format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PS Claim 1; SEQ ID NO 8901; 658pp; English.
 XX
 CC The invention relates to a single exon nucleic acid probe (SENP) (I) for
 CC measuring human gene expression in a sample derived from human adult
 CC liver, comprising one of 13109 defined nucleotide sequences given in the
 CC specification (or complements/ fragments). The probe hybridizes at high
 CC stringency to a nucleic acid molecule expressed in the human adult liver.
 CC (I) may be used for predicting, measuring and displaying gene expression
 CC in samples derived from human adult liver. The genes identified may be
 CC involved in genetic liver diseases such as cirrhosis,
 CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
 CC associated with coronary heart disease. ABS25011-ABS51005 represent human
 CC liver single exon nucleic acid probes of the invention. Note: The
 CC sequence information for this patent does not appear in the printed
 CC specification but was obtained in electronic format directly from WIPO at

 XX Spatially-addressable set of single exon nucleic acid probes, used to
 PT measure gene expression in human lung samples.
 PT
 XX

PS Claim 1; SEQ ID NO 8871; 634pp; English.

XX The invention relates to a spatially-addressable set of single exon

CC nucleic acid probes for measuring gene expression in a sample derived

CC from human lung comprising single exon nucleic acid probes having one of

CC 12614 nucleic acid sequences mentioned in the specification, or their

CC complements or the 12387 open reading frames derived from the 12614

CC probes. Also included are a microarray comprising the novel set of probes

CC; the novel set of probes which hybridise at high stringency to a nucleic

CC acid expressed in the human lung; measuring gene expression in a sample

CC derived from human lung, comprising (a) contacting the array with a

CC collection of detectably labeled nucleic acids derived from human lung

CC mRNA, and (b) measuring the label detectably bound to each probe of the

CC array; identifying exons in a eukaryotic genome, comprising (a)

CC algorithmically predicting at least one exon from genomic sequences of

CC the eukaryote; and (b) detecting specific hybridisation of detectably

CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,

CC having a fragment identical to the predicted exon, the probe is included

CC in the above mentioned microarray; assigning exons to a single gene,

CC comprising (a) identifying exons from genomic sequence by the method

CC above and (b) measuring the expression of each of the exons in several

CC tissues and/or cell types using hybridisation to a single exon

CC microarrays having a probe with the exon, where a common pattern of

CC expression of the exons in the tissues and/or cell types indicates that

CC the exons should be assigned to a single gene; a peptide comprising one

CC of 12011 sequences, mentioned in the specification, or encoded by the

CC probes/open reading frames (ORF). The probes are used for gene expression

CC analysis, and for identifying exons in a gene, particularly using human

CC lung derived mRNA and for the study of lung diseases such as asthma, lung

CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung

CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,

CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-

CC Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary

CC histiocytosis, lymphangioleiomyomatosis, pulmonary alveolar proteinosis,

CC Karagenes syndrome, fibrocystic pulmonary dysplasia, primary ciliary

CC dyskinesia, pulmonary hypertension and hyaline membrane disease. The

CC present sequence is a single exon probe of the invention. Note: The

CC sequence data for this patent did not form part of the printed

CC specification, but was obtained in electronic format directly from WIPO

PT for homologous nucleic acids required for cellular proliferation to

PT isolate candidate molecules for rational drug discovery programs.

XX

XX Claim 14; SEQ ID NO 23975; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of

CC the 6213 antisense sequences given in the specification where expression

CC of the nucleic acid inhibits proliferation of a cell. Also included are:

CC (1) a vector comprising a promoter operably linked to the nucleic acid

CC encoding a polypeptide whose expression is inhibited by the antisense

CC nucleic acid; (2) a host cell containing the vector; (3) an isolated

CC antisense nucleic acid; (4) an antibody capable of specifically binding

CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular

CC proliferation or the activity of a gene in an operon required for

CC proliferation; (7) identifying a compound that influences the activity of

CC the gene product or that has an activity against a biological pathway

CC required for proliferation, or that inhibits cellular proliferation; (8)

CC identifying a gene required for cellular proliferation or the biological

CC pathway in which a proliferation-required gene or its gene product lies

CC or a gene on which the test compound that inhibits proliferation of an

CC organism acts; (9) manufacturing an antibiotic; (10) profiling a

CC compound's activity; (11) a culture comprising strains in which the gene

CC product is overexpressed or underexpressed; (12) determining the extent

CC to which each of the strains is present in a culture or collection of

CC strains; or (13) identifying the target of a compound that inhibits the

CC proliferation of an organism. The antisense nucleic acids are useful for

CC identifying proteins or screening for homologous nucleic acids required

CC for cellular proliferation to isolate candidate molecules for rational

CC drug discovery programs, or for screening homologous nucleic acids

CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,

CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target

CC prokaryotic essential genes. Note: The sequence data for this patent did

CC not form part of the printed specification, but was obtained in

CC electronic format directly from WIPO at

DR
XX New recombinant nucleic acid encoding carcinoma associated protein,
PT useful for preparing compositions for treating carcinomas.
PT
XX Claim 1; SEQ ID NO 1058; 245pp; English.
PS
XX The invention relates to recombinant carcinoma associated (CA) nucleic
CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a biochip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC leukaemia) or a propensity to carcinoma by determination of the sequence
CC of a CA gene, or by determination of CA gene expression in particular
CC tissues. CA nucleic acids, proteins and antibodies are also useful as
CC therapeutic agents and in screening and evaluating drug candidates. The
CC present sequence represents a specifically claimed human CA nucleic acid
CC sequence of the invention. Note: The complete sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT comprises a nucleotide sequence.
XX
PS Claim 1; SEQ ID NO 466; opp; English.
XX
CC The present invention relates to novel DNA and protein sequences which
CC are associated with carcinomas. The sequences are useful for: (i) for
CC screening drug candidates; (ii) for screening of bioactive agent capable
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC a bioactive agent capable of modulating the activity of CAP; (iv) for
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC determining Carcinoma Associated (CA) gene copy number. In addition, the
CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC carcinoma including lymphoma. The present sequence is one such CA coding

CC sequence. Note: This patent is an equivalent to basic patent
CC US2002182586A1, for which no sequence data was published

PT Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide,
PT useful as molecular targets for diagnostics, prophylaxis and treatment of
PT pathological conditions resulting from bacterial infection.
XX
PS Disclosure; SEQ ID NO 15626; 455pp; English.
XX
CC The invention relates to Pseudomonas aeruginosa polypeptides and the
CC polynucleotides encoding them. The sequences are useful in diagnosis and
CC therapy of pathological conditions, as molecular targets for diagnostics,
CC prophylaxis and treatment of pathological conditions resulting from a
CC bacterial infection, for evaluating a compound, such as a polypeptide,
CC for the ability to bind a P. aeruginosa nucleic acid, as components of
CC effective antibacterial targets, as targets for antibacterial drugs,
CC including anti-P. aeruginosa drugs, as templates for recombinant
CC production of P. aeruginosa-derived peptides or polypeptides, as target
CC components for diagnosis and/or treatment of P. aeruginosa-caused
CC infection, and in detection of P. aeruginosa sequences or other sequences
CC of Pseudomonas species using biochip technology. Sequences ABD01397-
CC ABD17967 represent P. aeruginosa polynucleotides of the invention. Note:

 PT New isolated nucleic acid molecule that encodes a plant protein or its
 PT fragment, useful for isolating a variety of agronomically significant
 PT genes associated with plant growth, quality or yield, and as molecular
 PT tags to map genes.
 XX
 PS Claim 1; SEQ ID NO 8399; 34pp; English.
 XX
 CC The invention relates to 17880 cotton expressed sequence tags (ESTs;
 CC ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated
 CC from primed or non-primed seeds from variety DP50B, mature seeds from
 CC variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
 CC tissue, developing fibres, carpel walls and septa from variety
 CC Nucotton33B. The invention also relates to substantially purified
 CC proteins or their fragments encoded by nucleic acid molecules of the
 CC invention, and to transformed plants having a nucleic acid construct
 CC comprising a nucleic acid of the invention. The cotton ESTs are useful as
 CC molecular tags to isolate genetic regions, to isolate genes, to map
 CC genes, to determine gene function and to determine whether genes are
 CC members of a particular gene family. The nucleic acid molecules may be
 CC used for isolating a variety of agronomically significant genes
 CC associated with plant growth, quality, yield, and could also serve as
 CC links in metabolic and catabolic pathways. The nucleic acid molecules are
 CC also useful for identifying genes important in initiating and maintaining
 CC seed germination or that may be used to mitigate stresses encountered
 CC during seed germination. The ESTs additionally enable the acquisition of
 CC promoters and cis-regulatory elements which will be useful to express
 CC agronomically significant genes in these tissues and/or other tissues,
 CC and also permits the acquisition of molecular markers useful in breeding
 CC schemes, genetic and molecular mapping, and in cloning of agronomically
 CC significant genes. The nucleic acid molecules are further useful for
 CC detecting the expression level or pattern of a protein or mRNA and for
 CC detecting the presence or quantity of a protein by tissue printing. The
 CC present sequence represents a specifically claimed EST isolated from a

CC cotton variety Nucotton33B androecium tissue cDNA library (LIB3828). The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from the US
 CC patent office at seqdata.uspto.gov/sequence.html?DocID=US20040123340

 PT New antisense nucleic acids, useful for identifying proteins or screening
 PT for homologous nucleic acids required for cellular proliferation to
 PT isolate candidate molecules for rational drug discovery programs.
 XX
 PS Claim 14; SEQ ID NO 19508; 1766pp; English.
 XX
 CC The invention relates to an isolated nucleic acid comprising any one of
 CC the 6213 antisense sequences given in the specification where expression
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:
 CC (1) a vector comprising a promoter operably linked to the nucleic acid
 CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC polypeptide or its fragment whose expression is inhibited by the
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon required for
 CC proliferation; (7) identifying a compound that influences the activity of
 CC the gene product or that has an activity against a biological pathway
 CC required for proliferation, or that inhibits cellular proliferation; (8)
 CC identifying a gene required for cellular proliferation or the biological
 CC pathway in which a proliferation-required gene or its gene product lies
 CC or a gene on which the test compound that inhibits proliferation of an

CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC prokaryotic essential genes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at

XX Novel human cancer associated protein encoded within open reading frame
PT of cancer associated gene, useful as targets for diagnosing cancer.
XX
PS Disclosure; SEQ ID NO 115; 182pp; English.
XX
CC The invention relates to cancer-associated proteins (CAP) and the cancer-
CC associated (CA) nucleic acids encoding them. The invention also relates
CC to a method for treating cancers involving administering to a patient an
CC inhibitor of CAP, and a method of screening for anticancer activity in a
CC potential drug involving providing a cell that expresses a CA gene,
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC drug candidate and monitoring the effect of the anticancer drug candidate
CC on expression of the CA gene. The CAP proteins are useful for detecting
CC cancer associated with expression of a CAP protein in a test cell sample
CC and for screening for a bioactive agent capable of modulating the
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC cancer, involving determining the expression of a CA nucleic acid in a
CC tissue. This sequence represents a murine CA gene of the invention. Note:

PS Claim 1; Page 5728-5732; 9803pp; English.
XX

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAG77789 represent sequences used in the exemplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922

 XX
 DR Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
 PT useful for preventing, diagnosing and/or treating cancers and metastasis.
 PT
 XX Disclosure; SEQ ID NO 31790; 3071pp + Sequence Listing; English.
 PS
 XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
 CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
 CC activity, and can be used in gene therapy and vaccine production. (I)
 CC proteins and polynucleotides may be used in the prevention, diagnosis and
 CC treatment of diseases associated with inappropriate (I) expression. For
 CC example, they may be used to treat disorders associated with decreased
 CC expression by rectifying mutations or deletions in a patient's genome
 CC that affect the activity of (I) by expressing inactive proteins or to
 CC supplement the patients own production of (I). Additionally, (I)
 CC polynucleotides may be used to produce the secreted (I), by inserting the
 CC nucleic acids into a host cell and culturing the cell to express the
 CC protein. (I) proteins and polynucleotides may be used to prevent,
 CC diagnose and treat immune/hematopoietic-related diseases, especially
 CC cancers and cancer metastases of hematopoietic-derived cells. AAK64703
 CC to AAK87694 represent human immune/hematopoietic antigen genomic
 CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
 CC represent sequences used in the exemplification of the present invention

XX XX
XX PT New polynucleotides which encode polypeptides involved in olfactory
XX PT sensation for identifying olfactory agonists and antagonists.
XX XX
XX PS Claim 1; Fig 2; 1857pp; English.
XX XX
XX CC The present sequence is one of a number of isolated polynucleotides which
XX CC encode polypeptides involved in olfactory sensation. The polynucleotides
XX CC can be used in screening for olfactory agonists and antagonists. The
XX CC methods allow for the determination of primary scents and the
XX CC identification of the odour receptors used to detect these primary
XX CC scents. The methods also enable determination of secondary scents and the
XX CC identification of combinations of odour receptors that are involved in
XX CC detecting such secondary scents. This enables the construction of a scent
XX CC representation (also called a scent fingerprint or scent profile), which
XX CC may be used to re-create and edit scents. Libraries of olfactory
XX CC receptors are useful for determining the interaction pattern of a
XX CC composition with the receptors, and can be used for determining
XX CC differences in the olfactory faculties of different individuals

XX PT New protein concerned in biosynthesis of isoquinoline alkaloid, and

```

```

PT having columbamine 7-O-methyltransferase and nor coclaurine synthetase
PT activity, useful for producing isoquinoline alkaloid.
XX PS Claim 1; SEQ ID NO 52; 35pp; Japanese.
XX XX
XX CC The invention relates to a novel protein concerned in biosynthesis of an
XX CC isoquinoline alkaloid. The protein has a fully defined sequence of 351 or
XX CC 352 amino acids as given in the specification, or a sequence in which one
XX CC or more amino acids are deleted, added, or substituted in the protein,
XX CC and having columbamine 7-O-methyltransferase, and nor coclaurine
XX CC synthetase activity. The protein and a transformed host are useful for
XX CC producing isoquinoline alkaloid. The isoquinoline alkaloid biosynthesis
XX CC protein encoding polynucleotide and cDNA library are useful for isolating
XX CC a full length gene concerned in biosynthesis of an isoquinoline alkaloid.
XX CC The alkaloid biosynthesis protein encoding polynucleotide is useful as a
XX CC probe for isolating a full length gene concerned in biosynthesis of an
XX CC isoquinoline alkaloid which is useful as a pharmaceutical raw material.
XX CC This polynucleotide sequence represents the DNA of an expressed sequence
XX CC tag relating to the isoquinoline alkaloid biosynthesis protein of the
XX CC invention.

 XX
 XX Single copy genomic hybridization probes for detecting specific nucleic
 PT acid sequences in sample by in situ hybridization useful for detection of
 PT acquired or inherited genetic diseases.
 XX
 PS Example 1; SEQ ID NO 342; 30pp; English.
 XX
 CC The invention relates to a nucleic acid hybridisation probe comprising a
 CC labelled, single copy nucleic acids of at least 50 nucleotides, which
 CC will hybridise to a deduced single copy sequence interval in target
 CC nucleic acid (TNA) of known sequence. The single copy sequence is deduced
 CC by comparing the target nucleic acid (e.g. a disease causing gene) with a
 CC collection of high and low complexity repeat sequences as found in the
 CC genome of the organism from containing the target nucleic acid. The probe
 CC is generated by PCR on the target sequence. The probe is essentially free
 CC of blocking nucleic acid sequences which will hybridise to repeat
 CC sequences within the genome of which the TNA is a part, and is labelled
 CC with a label selected from fluorochrome-responsive labels, fluorochromes,
 CC calorimetric chemical, conjugated proteins, antibodies, antigens and
 CC their mixtures. The probe is useful in a hybridisation method, where the
 CC hybridisation method is from in situ hybridisation, Southern blot, and
 CC other methods in which nucleic acid is immobilised, where the method
 CC further comprises selecting a single copy nucleic acid which will
 CC hybridise to a duplicon or triplicon sequence domain. The probe is useful
 CC for determining the existence of previously unknown repeat sequence

will hybridize to a deduced single copy sequence interval in target nucleic acid (TNA) of known sequence. (I) is useful in a hybridization method which comprises preparing a reaction mixture comprising TNA and (I) which hybridizes to TNA, and causing (I) to hybridize to TNA, where the hybridization method is from in situ hybridization, Southern blot, and other methods in which nucleic acid is immobilized, where the method further comprises selecting a single copy nucleic acid which will hybridize to a duplcon or triplicon sequence domain. (I) is useful for determining the existence of previously unknown repeat sequence families in a genome; determining a chromosome breakpoint and in the fields of cytogenetics and molecular genetics for determining the presence of specific nucleic acid sequences in a sample of eukaryotic origin, e.g. the probes may be used to analyze specific chromosomal locations by in situ hybridization as a detection of acquired or inherited genetic diseases especially for detection of genetic or neoplastic disorders. Unlike prior art techniques, (I) permits more precise chromosomal breakpoint determinations by in situ hybridization. Hybridization techniques utilizing (I), have made it possible to obtain reliable, easily detectable signals with relatively small probes. A readily detectable signal was obtained with a probe on the order of 2 kb in length, using fluorescent in situ hybridization (FISH) technology. This sensitivity of (I) is improved compared to the prior art, because the probes of (I) are homogeneous single copy sequences. However, smaller amplified segments, each comprising non-repetitive sequences, may also be used in combination as probes to achieve adequate signals for in situ hybridization. Complex single copy probes that hybridize to duplicated or triplicated targets can also increase hybridization signals. This sequence represents a human HIRA genomic sequence that shows homology to a known high-complexity repeat sequence family of the human genome and is used in the creation of an HIRA gene probe.

CC used in combination as probes to achieve adequate signals for
CC hybridization. Complex single copy probes that hybridize to
CC triplicated targets can also increase hybridization signals.
CC sequence represents a human HIRA genomic sequence that show
CC a known high-complexity repeat sequence family of the human
CC used in the creation of an HIRA gene probe.

XX Human genome-derived single exon nucleic acid probes useful for analyzing
PT gene expression in human cervical epithelial cells.
XX Claim 25; SEQ ID NO 13277; 487pp; English.
XX The present invention relates to human single exon nucleic acid probes
CC (SENP). The present sequence is one such probe. The SENPs are derived
CC from human HeLa cells. The SENPs can be used to produce a single exon
CC microarray, which can be used for measuring human gene expression in a
CC sample derived from human cervical epithelial cells. By measuring gene
CC expression, the probes are therefore useful in grading and/or staging of
CC diseases of the cervix, notably cervical cancer. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at

 DR Human genome-derived single exon nucleic acid probes useful for analyzing
 XX gene expression in human adult liver.

```
XX Claim 4; SEQ ID NO 17199; 658pp; English.
XX
XX The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC measuring human gene expression in a sample derived from human adult
CC liver, comprising one of 13109 defined nucleotide sequences given in the
CC specification (or complements/ fragments). The probe hybridises at high
CC stringency to a nucleic acid molecule expressed in the human adult liver.
CC (I) may be used for predicting, measuring and displaying gene expression
CC in samples derived from human adult liver. The genes identified may be
CC involved in genetic liver diseases such as cirrhosis,
CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC associated with coronary heart disease. ABS25011-ABS51005 represent human
CC liver single exon nucleic acid probes of the invention. Note: The
CC sequence information for this patent does not appear in the printed
CC specification but was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX nucleic acid probes for measuring gene expression in a sample derived
XX from human lung comprising single exon nucleic acid probes having one of
XX 12614 nucleic acid sequences mentioned in the specification, or their
XX complements or the 12387 open reading frames derived from the 12614
XX probes. Also included are a microarray comprising the novel set of probes
```

PT isolate candidate molecules for rational drug discovery programs.

PS Claim 14; SEQ ID NO 26246; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of
 CC the 6213 antisense sequences given in the specification where expression
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:
 CC (1) a vector comprising a promoter operably linked to the nucleic acid
 CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC polypeptide or its fragment whose expression is inhibited by the
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon required for
 CC proliferation; (7) identifying a compound that influences the activity of
 CC the gene product or that has an activity against a biological pathway
 CC required for proliferation, or that inhibits cellular proliferation; (8)
 CC identifying a gene required for cellular proliferation or the biological
 CC pathway in which a proliferation-required gene or its gene product of an
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
 CC product is overexpressed or underexpressed; (12) determining the extent
 CC to which each of the strains is present in a culture or collection of
 CC strains; or (13) identifying the target of a compound that inhibits the
 CC proliferation of an organism. The antisense nucleic acids are useful for
 CC identifying proteins or screening for homologous nucleic acids required
 CC for cellular proliferation to isolate candidate molecules for rational
 CC drug discovery programs, or for screening homologous nucleic acids
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target
 CC prokaryotic essential genes. Note: The sequence data for this patent did
 CC not form part of the printed specification, but was obtained in
 CC electronic format directly from WIPO at

XX New combination of atherosclerosis-associated genes, useful for the
PT differential diagnosis of e.g. myocardial infarction, hypertension,
PT ischemia or stroke, or for staging or treating atherosclerosis-associated
PT disorders.

XX Claim 1; SEQ ID NO 22; 60pp; English.

XX The invention relates to a combination of several cDNAs, which are co-

CC expressed with one or more known human atherosclerosis-associated genes,

CC is new. The cDNAs comprise any of 25 sequences appearing as ADM29557-

CC ADM29581or the complements of any of these sequences. Also included are

CC detecting differential expression of one or more cDNAs in a sample

CC containing nucleic acids, using cDNAs to screen a sample and identify a

CC ligand that specifically binds a cDNA, a vector containing the cDNA, a

CC host cell containing the vector, producing a protein, an atherosclerosis-

CC associated protein appearing as ADM29582, using a protein to screen

CC several molecules or compounds (and identify at least one ligand that

CC specifically binds the protein), using a protein to produce an antibody,

CC an antibody produced by the method, and using an antibody to detect gene

CC expression in a sample. The cDNAs are useful for detecting differential

CC expression of one or more cDNAs in a sample containing nucleic acids.

CC This differential expression is diagnostic of angina pectoris, coronary

CC artery disease, myocardial infarction, hypertension, transient cerebral

CC ischaemia, mesenteric ischaemia, peripheral vascular disease, renal

CC artery stenosis, diabetes mellitus, obesity, polycystic ovarian syndrome,

CC or stroke. The cDNAs or proteins are useful for screening a sample and

CC identifying a ligand, which specifically binds a cDNA or protein,

CC respectively. The protein is also useful for producing an antibody for

CC detecting gene expression in a sample. The combination of cDNAs is also

CC useful for staging, treating, or monitoring the progression of, disorders

CC associated with atherosclerosis, such as diabetes mellitus, obesity,

CC polycystic ovarian syndrome, and cancers. The present sequence is a human

CC atherosclerosis-associated cDNA of the invention.

PS Claim 1; SEQ ID NO 4179; 658pp; English.
 XX
 CC The invention relates to a single exon nucleic acid probe (SENP) (I) for
 CC measuring human gene expression in a sample derived from human adult
 CC liver, comprising one of 13109 defined nucleotide sequences given in the
 CC specification (or complements/ fragments). The probe hybridises at high
 CC stringency to a nucleic acid molecule expressed in the human adult liver.
 CC (I) may be used for predicting, measuring and displaying gene expression
 CC in samples derived from human adult liver. The genes identified may be
 CC involved in genetic liver diseases such as cirrhosis,
 CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
 CC associated with coronary heart disease. ABS25011-ABS51005 represent human
 CC liver single exon nucleic acid probes of the invention. Note: The
 CC sequence information for this patent does not appear in the printed
 CC specification but was obtained in electronic format directly from WIPO at

 XX
 XX Spatially-addressable set of single exon nucleic acid probes, used to
 XX measure gene expression in human lung samples.
 XX
 XX Claim 1; SEQ ID NO 4107; 634pp; English.
 XX
 XX The invention relates to a spatially-addressable set of single exon
 XX nucleic acid probes for measuring gene expression in a sample derived
 XX from human lung comprising single exon nucleic acid probes having one of
 XX 12614 nucleic acid sequences mentioned in the specification, or their
 XX complements or the 12387 open reading frames derived from the 12614
 XX probes. Also included are a microarray comprising the novel set of probes
 XX ; the novel set of probes which hybridise at high stringency to a nucleic

CC acid expressed in the human lung; measuring gene expression in a sample
 CC derived from human lung, comprising (a) contacting the array with a
 CC collection of detectably labeled nucleic acids derived from human lung
 CC mRNA, and (b) measuring the label detectably bound to each probe of the
 CC array; identifying exons in a eukaryotic genome, comprising (a)
 CC algorithmically predicting at least one exon from genomic sequences of
 CC the eukaryote; and (b) detecting specific hybridisation of detectably
 CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
 CC having a fragment identical to the predicted exon, the probe is included
 CC in the above mentioned microarray; assigning exons to a single gene,
 CC comprising (a) identifying exons from genomic sequence by the method
 CC above and (b) measuring the expression of each of the exons in several
 CC tissues and/or cell types using hybridisation to a single exon
 CC microarrays having a probe with the exon, where a common pattern of
 CC expression of the exons in the tissues and/or cell types indicates that
 CC the exons should be assigned to a single gene; a peptide comprising one
 CC of 12011 sequences, mentioned in the specification, or encoded by the
 CC probes/open reading frames (ORF). The probes are used for gene expression
 CC analysis, and for identifying exons in a gene, particularly using human
 CC lung derived mRNA and for the study of lung diseases such as asthma, lung
 CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
 CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
 CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
 CC Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
 CC histiocytosis, lymphangioleiomyomatosis, pulmonary alveolar proteinosis,
 CC Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
 CC dyskinesia, pulmonary hypertension and hyaline membrane disease. The
 CC present sequence is a single exon probe of the invention. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO

CC	to the sequences of the invention. The invention additionally relates to	
CC	recombinant vectors and host cells comprising human ovarian antigen	
CC	polynucleotides, antibodies against human ovarian antigens, and the use	
CC	of ovarian antigen polynucleotides and polypeptides in diagnosing,	
CC	treating, prognosing or preventing various ovary and/or breast-related	
CC	disorders. Such conditions include ovarian cancer and breast cancer, and	
CC	metastatic tumours of ovarian or breast origin, reproductive system	
CC	disorders (e.g., infertility, disorders of pregnancy, anovulation,	
CC	polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine	
CC	disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic	
CC	shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and	
CC	vaginitis), immune disorders (e.g., congenital and acquired	
CC	immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),	
CC	blood-related disorders (e.g., anaemia), cardiovascular disorders,	
CC	respiratory disorders, neurological disorders, gastrointestinal disorders	
CC	and urinary system disorders. Ovarian antigen polypeptides and	
CC	polynucleotides may also be used in screening for compounds which	
CC	modulate ovarian antigen expression or activity. The polynucleotides may	
CC	further be used for gene therapy, chromosome mapping, in the	
CC	identification of individuals and in forensic analysis, and the	
CC	polypeptides may be used as food additives or to prepare antibodies	
CC	useful in disease diagnosis, drug targeting and phenotyping. The present	
CC	sequence represents a cDNA encoding a human ovarian antigen of the	
CC	invention. Note: The sequence data for this patent did not form part of	
CC	the printed specification, but was obtained in electronic format directly	
CC	from WIPO at ftp.wipo.int/pub/published_pat_sequences

PT	determining the expression of one or more efficacy genes in a cell	
PT	contacted with the test compound.	
XX		
PS	Claim 13; SEQ ID NO 151; 39pp; English.	
XX		
CC	This invention relates to a novel screening method identified as a multi-	
CC	parameter high throughput screening (MPHTS) assay. Specifically, it	
CC	refers to an assay that utilises the disease signature of a plurality of	
CC	specific genes associated with a particular disease, and identifies	
CC	differential expression between those cells taken from individuals	
CC	affected by that disease and those that are not affected. The present	
CC	invention then describes the screening of candidate pharmaceutical	
CC	compounds to identify those that have a potential therapeutic benefit for	
CC	the treatment of neuropsychiatric and neurodegenerative disorders	
CC	including schizophrenia, bipolar affective disorder (BAD) and autism, as	
CC	well as Parkinson's and Alzheimer's disease. Accordingly, the compounds	
CC	of this invention exhibit various activities including neuroleptic,	
CC	nootropic, antimanic and antidepressant. Furthermore, the screening	
CC	method used in MPHTS will be automated, such that a large number of test	
CC	compounds may be rapidly screened with a minimal amount of labour and	
CC	effort. This polynucleotide is a human cDNA sequence of a gene that is	
CC	differentially expressed in the presence of the therapeutic compound	
CC	valproate, given in an exemplification of the invention.

 XX Diagnosing and analyzing autoimmune disease using gene expression
 PT profiles and microarray technology, useful for diagnosing and treating
 PT rheumatoid arthritis, lupus, fibrositis, osteoarthritis, fibromyalgia and
 PT gout.
 XX Disclosure; Page; 56pp; English.
 XX The invention relates to a novel method for diagnosing and analysing
 CC autoimmune disease or arthritides. The method comprises obtaining a
 CC patient sample containing mRNA, analysing gene expression using the mRNA
 CC that results in a gene expression signature of the mRNA, and using that
 CC gene expression signature to diagnose or analyse the autoimmune disease
 CC or arthritides in the patient, where gene expression of at least 60% of
 CC the genes correlates with that of the gene signature. The invention
 CC further comprises: a treatment of rheumatoid arthritis; identification of
 CC genes for targeting in the treatment of rheumatoid arthritis in a mammal
 CC other than a mouse; diagnosis of rheumatoid arthritis in a mammal; an
 CC array or gene chip, specific for rheumatoid arthritis; diagnosis or
 CC analyses of autoimmune disease or rheumatoid arthritis; screening the
 CC efficacy of a candidate drug in vitro for the treatment of collagen-
 CC induced arthritis; and reducing the symptoms associated with collagen-
 CC induced arthritis. The compositions of the invention have the following
 CC activities: immunosuppressive, anti-rheumatic, antiarthritic, osteopathic,
 CC antitumor, antiinflammatory, dermatological, and immunomodulatory. The
 CC methods and compositions of the present invention are useful for
 CC diagnosing and treating autoimmune disease or arthritides, such as
 CC rheumatoid arthritis, lupus, ankylosing spondylitis, fibrositis,
 CC fibromyalgia, osteoarthritis, gout, juvenile rheumatoid arthritis, and an
 CC immune disease caused by an infectious agent. This polynucleotide
 CC represents a DNA sequence relating to the genes used in the analysis and
 CC treatment of autoimmune diseases or arthritides. Note: This sequence is
 CC not shown in the specification. It has been supplied in an electronic
 CC format from WIPO.

XX
XX Novel prostatic-cancer marker polypeptide, useful for diagnosing
PT prostatic-cancer or androgen independent prostatic-cancer.
XX
XX Claim 23; SEQ ID NO 64; 43pp; Japanese.
XX
XX The invention relates to a novel prostatic cancer marker polypeptide
CC comprising any one of 35 fully defined amino acid sequences (SEQ ID NOS:1
CC -35) as given in specification. Prostate-specific antigen (PSA) is
CC currently widely used as a prostatic tumor marker. Certain problems are
CC associated with diagnosis using PSA, however, such as false positives and
CC ambiguity between benign and malignant results. The polypeptides of the
CC invention demonstrate cytostatic activity and may be useful for
CC diagnosing and treating prostatic cancer or androgen-independent
CC prostatic cancer. The polypeptides may be utilized for immunotherapy. The
CC current sequence is that of the human prostatic cancer marker, PEG3
CC Kruppel-type zinc finger DNA of the invention.

XX
XX Claim 3; Page 13-15; 39pp; English.
XX
XX The present invention relates to the isolation of cDNA fragments and the
CC full-length cDNA sequence encoding human paternally expressed gene 3
CC (PEG3). PEG3 is a zinc finger protein thought to act as a transcription
CC factor. The polynucleotide sequences encoding PEG3 are useful in gene
CC therapy to increase or decrease (using the antisense form of the nucleic
CC acid) the expression of PEG3 in cells of a human patient, particularly
CC for modifying or controlling body weight (to treat obesity) or behaviour,
CC or for thermoregulation. The PEG3 polynucleotide sequence is also useful
CC in diagnostic assays, e.g. for testing an individual's susceptibility to
CC obesity or a thermoregulatory disorder, or for diagnosing and staging
CC diseases involving cell death and degeneration (e.g. Alzheimer's
CC disease). The PEG3 polypeptide is useful for prophylactic and/or
CC therapeutic treatment. The present sequence encodes human PEG3

 PT Detecting an ovarian cancer-associated transcript in a cell from a
 PT patient, comprises contacting a biological sample from the patient with a
 PT polynucleotide that hybridizes to an ovarian cancer gene.
 XX
 XX Claim 10; Page 316-317; 332pp; English.
 PS
 XX The invention relates to a method of detecting an ovarian cancer-
 CC associated transcript in a cell from a patient, by contacting a
 CC biological sample from the patient with a polynucleotide that selectively
 CC hybridizes to a sequence at least 80% identical to any of one of 80
 CC nucleic acid sequences given in the specification. The method is useful
 CC in diagnosing ovarian cancer and in identifying and using agents and/or
 CC targets that inhibit ovarian cancer. The nucleic acid molecule,
 CC polypeptide and the antibody may also be used in detecting ovarian
 CC cancers, monitoring and early detection of relapse following treatment,
 CC monitoring response to therapy, selecting patients for post-operative
 CC chemotherapy or radiation therapy, in selecting mode of therapy,
 CC determining tumour prognosis, early detection of pre-cancerous lesions,
 CC and as vaccines. This sequence corresponds to one of the nucleic acids
 CC used for the detection method of the invention.

CC carrier; an antibody directed against the polypeptide of (3); a method
 CC for detecting (1) in a sample; a method for detecting the polypeptide of
 CC (3) in a sample; a method for identifying a compound that binds to the
 CC polypeptide of (3); a method for producing the polypeptide of (3); and a
 CC collection of polynucleotides, where the collection comprising of at
 CC least one of SEQ ID NOS: 1-567. (1) is a polynucleotide comprising any of
 CC the sequences of SEQ ID NOS: 1-567 encoding a polypeptide with biological
 CC activity, which comprises any of the amino acid sequence of SEQ ID NOS:
 CC 568-1134. All sequences are fully defined in the specification. The
 CC sequences and methods are useful in diagnostics, forensic, and gene
 CC mapping, in identifying of mutations responsible for genetic disorders or
 CC other traits, in assessing biodiversity, and for producing many other
 CC types of data and products dependent on DNA and amino acid sequences. The
 CC composition and method are useful for treating a disease or disorder,
 CC e.g. osteoporosis, osteoarthritis, periodontal disease, burns, CNS and
 CC peripheral disease, Alzheimer's disease, Parkinson's disease, stroke,
 CC autoimmune disorders, viral infection, or cancer. This sequence encodes a
 CC novel polypeptide of the invention.

XX Human proteins and DNA encoding sequences useful for preventing, treating

PT or ameliorating a medical condition in a mammalian subject e.g. arthritis
 and cancer.

PS Claim 1; Page 1002-1004; 1963pp; English.

XX Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and
 CC sequences ABA09225-ABA09574 represent nucleic acids encoding them. The
 CC invention also relates to vectors and recombinant host cells comprising a
 CC nucleotide of the invention, methods of producing the novel polypeptides,
 CC antibodies against the polypeptides, methods of detecting the nucleotides
 CC or polypeptides in a sample, and methods of identifying compounds which
 CC bind to polypeptides of the invention. Although novel, many of the
 CC polypeptides of the invention have homology to known proteins, thereby
 CC giving an insight into their probable biological activities, and hence
 CC potential therapeutic applications. The polypeptides of the invention may
 CC have various activities, including cytokine, cell proliferation or cell
 CC differentiation activities; stem cell growth factor activity;
 CC haematopoiesis regulatory activity; tissue growth activity;
 CC immunomodulatory activity; activin- or inhibin-related activities;
 CC chemotactic or chemokinetic activities; haemostatic, thrombotic or
 CC thrombolytic activities; receptor or ligand activities; or may be
 CC involved in oncogenesis; cancer cell proliferation or metastasis.
 CC Depending on their biological activities, polypeptides and nucleotides of
 CC the invention are useful for preventing, treating or ameliorating medical
 CC conditions, e.g., by protein or gene therapy. Such conditions include
 CC cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell
 CC disorders), chronic inflammatory conditions (e.g., asthma or arthritis),
 CC proliferative retinopathy, atherosclerosis, coronary heart disease,
 CC arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal
 CC vascular growth. Polypeptides involved with tissue regeneration and
 CC repair (or nucleic acids encoding them) may be used to promote wound
 CC healing (e.g., of burns, incisions and ulcers), while those with
 CC immunomodulatory activities may be used in the treatment of viral,
 CC bacterial and fungal infections in addition to immune disorders.

XX Polypeptides with growth factor activity may be used in cell cultures to
 CC promote cell growth. For example, such polypeptides may be used to
 CC manipulate stem cells in culture to give rise to neuroepithelial cells
 CC that can be used to augment or replace cells damaged by illness,
 CC autoimmune disease or accidental damage. The polypeptides and nucleotides
 CC may also be used in the diagnosis of the above conditions, and in drug
 CC screening techniques. The present sequence represents a cDNA encoding a
 CC novel human polypeptide of the invention

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 37745; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I) amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to

CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

PA (HUMA-) HUMAN GENOME SCI INC.
PI Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-483426/52.
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX Disclosure; SEQ ID NO 37746; 3071pp + Sequence Listing; English.
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT Predicting toxicity of compounds, useful in development of safe drugs, by
PT measuring the differential expression of specific genes in cells exposed
PT to test compounds.
XX PS Claim 2; SEQ ID NO 556; 895pp; English.
XX CC The invention relates to methods of predicting at least one toxic effect
CC (or toxicity progression or the mechanism of toxicity) of a compound. The
CC methods involve detecting the level of expression of at least one of a
CC set of 680 genes ADW21622-ADW22301 or at least one of a set of 17 genes
CC (including ADW22362, ADW22414 and ADW22481-ADW22483) in a tissue or cell
CC exposed to the compound, and determining whether the gene is
CC differentially expressed compared with a control tissue or cell.
CC Differential expression of the gene in the presence of the compound is
CC indicative of a toxic effect, of toxicity progression or of a specific
CC mechanism of toxicity. The toxic effect is especially hepatotoxicity,
CC particularly hepatitis, liver necrosis, protein adduct formation or fatty
CC liver. The invention also relates to sets of primers and probes specific
CC for at least two genes selected from ADW21622-ADW22301; solid supports
CC (e.g., DNA chips) and kits containing the probes; and a database
CC containing DNA sequence information and expression information for at
CC least two of the 680 genes from hepatotoxin-exposed tissues. The
CC invention is based on the determination of global changes in gene
CC expression in tissues or cells exposed to known toxins, particularly
CC hepatotoxins, and the identification of individual genes (toxicity
CC markers) that are differentially expressed on toxin exposure. The changes
CC in gene expression can be characteristic of different mechanisms of
CC hepatotoxicity mediated by various classes of compounds. Such compounds
CC include: direct acting compounds which cause damage to macromolecules,
CC especially proteins and lipids by directly interacting with them;
CC steatotic compounds which cause an accumulation of fat in the liver; and
CC cholestatic compounds which impair bile flow or bile acid transport,
CC resulting in jaundice. The methods of the invention are useful in
CC toxicology screening for predicting the toxic effects (especially
CC hepatotoxic effects) of compounds for the development of safer drugs.
CC Sequences ADW21622-ADW22301 represent specifically claimed hepatotoxicity
CC marker genes of rat origin whose expression is altered on exposure to
CC hepatotoxins.

 XX New polynucleotides derived from human prostate, useful for modulating
 PT immune response to prevent or treat cancer.
 PT
 XX
 XX Claim 1; SEQ ID NO 422; 188pp; English.

CC This invention relates to novel isolated polynucleotides of human origin,
 CC particularly isolated from the human prostate. Specifically, it refers to
 CC the diagnostics and therapeutics comprising these novel human
 CC polynucleotides, and includes the derived probes, antisense
 CC oligonucleotides and antibodies thereof. The identification of these
 CC human prostate genes that can inhibit tumour growth is useful for
 CC understanding the progression and nature of complex diseases such as
 CC cancer, and hence they are important in the drug discovery process. The
 CC present invention describes these polynucleotides and encoded
 CC polypeptides as exhibiting cytostatic activity, and through gene therapy
 CC and/or vaccines they can be used to modulate the immune response for the
 CC prevention or treatment of cancers, particularly of the prostate, but
 CC also for breast, lung and colon cancer. This polynucleotide sequence is a
 CC human cDNA sequence useful for the treatment of cancer, used in an
 CC exemplification of the invention. NOTE: These sequences are not given in
 CC the specification but are provided on the WIPO website.

 DR
 XX New genes and gene products isolated from human prostate, useful for
 PT treating or diagnosing tumor or cancer (e.g. prostate cancer or breast
 PT cancer), or as vaccines for treating or preventing these diseases.
 PT
 XX Claim 1; SEQ ID NO 423; 186pp + Sequence Listing; English.
 PS
 CC The invention relates to an isolated polynucleotide comprising any of
 CC 1477 sequences or its fragment, degenerate variant, antisense or
 CC complement. The polynucleotides and gene products are useful for treating
 CC or diagnosing tumor or cancer (e.g. prostate cancer, breast cancer, lung
 CC cancer or medullary carcinoma) in a subject (e.g. cattle, dogs, cats,
 CC rabbits, horse or human). The polynucleotides and polypeptides are also

CC useful as vaccines for treating or preventing these diseases. The
 CC polynucleotides are useful for gene therapy. The present sequence is that
 CC of one of a group of polynucleotides (ABQ8745-ABQ90015) disclosed
 CC electronically as sequences of the invention. However only 1271
 CC polynucleotide sequences are given, whereas 1477 polynucleotides and 91
 CC proteins are claimed. Note: The sequence data for this patent did not
 CC form part of the printed specification, but was obtained in electronic
 CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequence

 DR Novel human polynucleotides that correspond to human gene trapped
 PT sequences useful for gene discovery, gene therapy, as markers for gene
 PT expression analysis, forensic analysis and determining genetic basis of
 PT diseases.
 XX Claim 1; SEQ ID NO 447; 36pp; English.
 PS This invention describes isolated or purified polynucleotides
 CC corresponding to human gene trapped sequence (GTS) comprising a sense or
 CC antisense sequence chosen from 1000 sequences or its fragment of 8
 CC contiguous nucleotides. GTSs are useful for gene discovery and as markers
 CC for gene expression analysis, identifying and mapping the coding regions
 CC of the mammalian and particularly human, genome, forensic analysis, for
 CC cross species hybridisation analysis, genetic manipulation, antisense
 CC inhibition, gene targeting, identification or generation of full-length
 CC cDNA, mapping the human genome, gene or antisense therapy, gene delivery
 CC and determining the genetic basis of human disease. Portion of the GTS
 CC sequences are useful as a hybridisation probe or for chromosome mapping,

CC and can be incorporated into phage display system that can be used to
 CC screen for proteins, or other ligands, that are capable of binding an
 CC amino acid sequence encoded by the GTS sequences. The GTS sequences are
 CC also useful to regulate gene expression, as a part of ribozyme and/or
 CC triple helix sequences that can be used to regulate gene expression, as
 CC components of diagnostic methods, for analysing single nucleotide
 CC polymorphisms, and also as genetic markers for prenatal analysis of
 CC congenital traits or defects. The polynucleotides of the invention are
 CC useful for diagnosis, prognosis of disorders involving developmental and
 CC differentiation processes and for the identification of subjects having a
 CC predisposition to such disorders. Diseases or natural processes that can
 CC be correlated with the expression of mutant or normal, variants of GTSs
 CC include, aging, cancer, autoimmune disease, Crohn's disease, multiple
 CC sclerosis, immune disorders, schizophrenia, skin disorders, rheumatoid
 CC arthritis, atherosclerosis, cardiovascular disease, degenerative diseases
 CC of the neural or skeletal systems, Alzheimer's disease, osteoporosis,
 CC asthma, and infections. GTSs can also be used to identify the specific
 CC locations of exon splice junctions, which are important in the study of
 CC disease and cancer. Modulating the level of expression of one or more
 CC genes and/or regulating activity of one or more peptides or proteins is
 CC useful for modifying development and cell differentiation and treating
 CC development and cell differentiation disorders. ABX64402-ABX65401
 CC represent the human gene trapped cDNA sequences described in the
 CC disclosure of the invention. NOTE: The sequence data for this patent did

 DR New isolated nucleic acid molecule, useful for drug screening and
 XX toxicity assays or for assessing the impact, including toxicity, of a

PT compound, pharmaceutical agent or environmental pollutant on a cell or
 XX living organism.
 PS Claim 1; SEQ ID NO 1683; 41pp; English.
 XX
 CC This invention is related to a novel isolated canine nucleic acid
 CC sequences and the construction of canine microarrays containing a
 CC significant portion of the canine genome. The isolated canine nucleic
 CC acid sequences of the invention may be useful for drug screening and
 CC toxicity assays. The invention is therefore useful for assessing the
 CC impact, including toxicity, of a compound, pharmaceutical agent or
 CC environmental pollutant on a cell or living organism. The methods are
 CC useful for detecting genes that are up- or down-regulated in canines in a
 CC disease state. The sequences are useful as diagnostic agents or markers
 CC to detect a cellular response in a sample individually or as part of a
 CC gene expression profile. It is also useful as a target for agents that
 CC modulate gene expression or activity. The database is useful for
 CC producing electronic Northern blots that allow the user to determine the cell
 CC type or tissue in which a given gene is expressed and to allow
 CC determination of the abundance or expression level of a given gene in a
 CC particular tissue or cell. The methods are useful for determining the
 CC similarity of a toxic response to one or more individual compounds. The
 CC methods are useful for predicting at least one toxic response or the
 CC likelihood that a compound or test agent will induce various specific
 CC pathologies such as those of the liver (liver necrosis, fatty liver
 CC disease, protein adduct formation or hepatitis), those of the kidney,
 CC heart, brain or testes, or other pathologies associated with at least one
 CC of the toxins. The methods are also useful for predicting or elucidating
 CC the potential cellular pathways influenced, induced or modulated by the
 CC compound or test agent due to the similarity of the expression profile
 CC compared to the profile induced by a known toxin. The present profile is
 CC that of a canine DNA sequence which was claimed for use during the
 CC production of a canine microarray of the invention.

 PT Detection of expression of specific Aspergillus genes for monitoring the
 PT fermentation and growth conditions of the fungus, using DNA probes.
 XX
 PS Claim 1; SEQ ID NO 3910; 48pp + Sequence Listing; Japanese.
 XX
 CC The invention relates to a polynucleotide having any of 6006 specific
 CC sequences (ABZ50888-ABZ56893), which are expressed by a fungus under
 CC specific culture conditions including one or more of eutrophic,
 CC oligotrophic, solid, early germination, alkaline, high temperature, low
 CC temperature or maltose culture or polynucleotides stringently hybridising
 CC to these sequences. The polynucleotides are useful for monitoring the

CC progress of fermentation and the growth conditions of a fungus,
CC especially of Aspergillus oryzae which is widely used in industrial
CC fermentation. Also monitoring for fungal contamination. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/lab_host="Escherichia coli BM25.8"
/clone_lib="(FHIG:C) Axenic plate culture"
/notes="Vector: pTriplEx2; Site_1: SfilI; Site_2: SfilI; This
EST clone is originating from one of three cDNA libraries,
constructed for transcript profiling of the mycorrhizal
interaction between the basidiomycete Paxillus involutus
and Betula pendula (birch). One library represents the
developed and functional mycorrhizal root tissue
('FHIG:A) Ectomycorrhiza plate culture'), a second
library represents axenically grown fungus ('FHIG:B)
Axenic plate culture') and a third library represents
axenically grown plants ('FHIG:C) Axenic plate culture'.
Libraries were analyzed in parallel and 3855 (FHIG:A),
3964 (FHIG:B), and 2532 (FHIG:C) high-quality (PHRED 20)
ESTs of >99bp have been deposited. The cDNA libraries were
constructed from total RNA using the SMART cDNA library
Construction kit (HK1051-1, Clontech, Palo Alto, CA, USA)
according to the manufacturer's instructions. Full-length
cDNAs were trimmed by SfilI, fractionated and directionally
ligated into (lambda)TriplEx2 arms. The lambda library was
converted to a plasmid library via site-specific
recombination at loxP sites in a Cre+ strain (E. coli
BM25.8). Plasmid clones were randomly collected and
analysed by DNA sequencing using a plasmid-specific
forward primer (P104)."

Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5'
 GAGAGAGAGATCCAGAGCTCTTTTCTTTTCTTTTNN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 10.0 and subtraction to Rot = 459.0. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGATCTCGAGTTAATTAATCCCCCCCCCC 3']. cDNA was cleaved with XhoI and BamHI. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I."

CDNA Library Preparation: DOE Joint Genome Institute:
http://www.jgi.doe.gov
DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov
Naming Conventions: EST name is generated by the concatenation of the JGI Clone Id and the direction of sequencing. The suffix '.rev' indicates a reverse sequencing read of the insert. It does not necessarily reflect the orientation of the insert.
Poly-T: A run of 14 or more T residues at the beginning of this sequence has been removed.
Plate: AOKG 0005 row: a column: 9
High quality sequence stop: 200.

            /clone_lib="SHGC-CNB"
            /notes="Vector: Express 1; Total and poly A+ RNA was
              isolated from the indicated stickleback tissue, and a cDNA
              library was constructed in the Express 1 plasmid vector by
              Open Biosystems. First strand cDNA synthesis was primed
              with an 54 bp linker primer containing an oligodt sequence
              preceded by a synthetic NotI site (first strand primer:
              5'-GACTAGTCTAGATCGGAGCGGCCGCTT)25-3'. Following
              second strand synthesis, cDNAs were made blunt at the end
              corresponding to the original 5 prime end of mRNA, and
              cloned directionally into the NotI and EcoRV sites of
              Express 1. Note that the EcoRV site is typically destroyed
              in the blunt end cloning, leaving a junction of the form
              'xxxATC' (where is ATC is the second half of the EcoRV
              site, and xxx is derived from the cDNA sequence). A map of
              the Express 1 vector is available at:
              http://www.openbiosystems.com/cdna_library_construction_fa
              q.php#8 The primary library was transformed and amplified
              in DH10B (T1 phage resistant) bacteria. Clones available
              from Open Biosystems:
              http://www.openbiosystems.com/stickleback"

The sequence contained an oligo-dT track that was present in the

oligonucleotide that was used to prime the synthesis of first

strand cDNA and therefore this may represent a bonafide poly A

tail. The sequence tag present in the cDNA between the NotI site

and the oligo-dT track served to identify it as a clone from the

normalized thalamus library cDNA library Preparation: M.B. Soares

Lab Clone distribution: clones will be available through Research

Genetics (www.resgen.com)

Seq primer: M13 Forward

NotI; Mouse cDNA project by the Laboratory of Genetics,

National Institute on Aging (NIA), Intramural Research

Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). This is

a long-transcript enriched cDNA library (Ref. Genome Res.

11: 1553-1558 (2001). [PMID: 11544199]. Total RNAs were

obtained from Dr. Angelo L. Vescovi (Institute for Stem

Cell Research, Italy). Double-stranded cDNAs were

synthesized with an Oligo(dT) primer [Invitrogen:

5'-pGACTAGTTCTAGATCGCGCGCCCTTTT-3'] from

2.0 Microgram of total RNA, treated with T4 DNA

polymerase, and purified by ethanol-precipitation. The

cDNAs were ligated to lone-linker L1-Sal4, purified by

phenol/chloroform, and separated from free linkers by

Centricon 100. Then, the cDNAs were amplified by

long-range high fidelity PCR using Ex Taq polymerase

(Takara) with a primer Sal4-S. The products were purified

by phenol/chloroform and Centricon 100. The cDNAs were

digested with SalI and NotI enzymes and cloned into

SalI/NotI site of pSPORT1 plasmid vector. The DH10B E.

coli host was transformed with the ligation mixture by the

standard chemical method. The average insert size is about

3.2 kb. The library was constructed by Yulan Piao."

Site 2: Not I; The library was constructed according to

```

Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured mRNA was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I, and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail, is TGAGAGAGCC. This library was created for the University of Iowa Mouse Brain Molecular Anatomy Project (BNAP). Gene Discovery in the Developing Mouse Nervous System, supported by National Institutes of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

 /clone_lib="NIA Mouse Trophoblast Stem Cell cDNA Library (long 1)"
 /notes="Vector: pCMV-SPORT6 (Invitrogen); Site 1: SalI; Site 2: NotI; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgun.grc.nia.nih.gov/cDNA). This is a long-transcript enriched cDNA library [Ref.]. Total Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]. Total RNAs were obtained from Dr. Janet Rossant and Tilo Kunath (Samuel Lunenfeld Research Institute, Canada). Double-stranded cDNAs were synthesized with an Oligo (dT) primer (Invitrogen): 5'-pGACTAGTCTAGATCGGCGCGCCCTTTT-3' from 4 ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pCMV-SPORT6 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.6 kb. The library was constructed by Yulan Piao."

Xho I; The cDNA library was constructed by He, C-Y from
mRNA isolated from two-week seedlings (cultivar Kefeng 1)
treated by spraying 2.0mM salicylic acid for 24, 36, 48
and 72 h. Complementary DNA was synthesized from mRNA
using a primer consisting of a poly(dT) sequence with a
XhoI restriction site. EcoRI adapters were ligated to the
blunt-ended cDNA fragments followed by XhoI digestion. The
cDNA fragments were directionally cloned into the
EcoRI-XhoI restriction site of the pBluescript vector. The
ligated cDNA fragments were transformed into XLI-Blue MRF
host cells (Stratagene)."

                Gamete (normalized), Lambda Zap II"
                /notes="Vector: pBluescript II SK-; Site 1: EcoRI; Site 2:
                XhoI; Gamete library was constructed by Hui Zhao, Min Lu,
                Jeffrey McDermott, William J. Snell and John Davies.
                Strain 21gr cells (CC-1690; mating type plus) and strain
                6145c cells (CC-1691; mating type minus) that had been
                growing on a light-dark cycle (13:11 L/D) in R-medium
                (Sager and Granick) were separately transferred into
                nitrogen-free medium at 8 hours into the light period.
                PolyA mRNA was purified from each sample every 2 hours for
                the next 18 hours. The mRNA was pooled and used for cDNA
                synthesis. The cDNA was directionally cloned into lambda
                Zap II (Stratagene) in the EcoRI (5') and XhoI (3')
                sites. pBluescript II SK- plasmids were excised from the
                lambda Zap clones by superinfection with ExAssist
                (Stratagene) phage. The library was normalized using
                method 4 described in Bonaldo et al., (1996) Genome
                Research 6: 791-806."

RESULT 1
US-09-738-274-25
; Sequence 25, Application US/09738274
; Patent No. 6664081
; GENERAL INFORMATION:
; APPLICANT: BRENTANO, Steven T.
; APPLICANT: JUCKER, Markus T.
; APPLICANT: DELGADO, Francisco D.
; APPLICANT: CLEUZIAT, Philippe
; APPLICANT: RODRIGUE, Marc

; TITLE OF INVENTION: NUCLEIC ACID AMPLIFICATION AND DETECTION OF
; FILE REFERENCE: GPI07-02.UT
; CURRENT APPLICATION NUMBER: US/09/738,274
; CURRENT FILING DATE: 2000-12-15
; PRIOR APPLICATION NUMBER: 60/172,190
; PRIOR FILING DATE: 1999-12-17
; NUMBER OF SEQ ID NOS: 42
; SOFTWARE: PatentIn Ver. 2.0
; SEQ ID NO 25
; LENGTH: 22
; TYPE: DNA
; ORGANISM: Artificial Sequence
; FEATURE:
; OTHER INFORMATION: Description of Artificial Sequence: primer
; OTHER INFORMATION: oligonucleotide
US-09-738-274-25

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Detecting Mycobacterium species, involves in vitro amplification of 16S
XX rRNA or DNA encoding RNA in nucleic acid amplification mixture using
XX specific primers, and detecting the amplified nucleic acid.
XX Claim 1; Page 34; 44pp; English.
XX The invention relates to a method of detecting Mycobacterium species,
XX that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
XX encoding 16S rRNA in an in vitro nucleic acid amplification mixture
XX comprising a polymerase, and at least two primers, and then detecting the
XX amplified nucleic acid. The method is relatively simple and useful for
XX detecting the presence of various Mycobacterium species in a biological
XX sample, and thus important for diagnosis of infections resulting from
XX them. The method is especially important for screening opportunistic
XX infections caused by M. tuberculosis or a Mycobacterium other than
XX tuberculosis (MOTT). The present sequence is a T7 promoter-primer used
XX for amplifying Mycobacterium 16S rRNA. (Updated on 11-SEP-2003 to
XX standardise OS field)

XX Detecting Mycobacterium species, involves in vitro amplification of 16S
PT rRNA or DNA encoding RNA in nucleic acid amplification mixture using
PT specific primers, and detecting the amplified nucleic acid.
XX
XX Claim 1; Page 34; 44pp; English.
XX
XX The invention relates to a method of detecting Mycobacterium species,
CC that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
CC encoding 16S rRNA in an in vitro nucleic acid amplification mixture
CC comprising a polymerase, and at least two primers, and then detecting the
CC amplified nucleic acid. The method is relatively simple and useful for
CC detecting the presence of various Mycobacterium species in a biological
CC sample, and thus important for diagnosis of infections resulting from
CC them. The method is especially important for screening opportunistic
CC infections caused by M. tuberculosis or a Mycobacterium other than
CC tuberculosis (MOTT). The present sequence is a T7 promoter-primer used
CC for amplifying Mycobacterium 16S rRNA. (Updated on 11-SEP-2003 to
CC standardise OS field)

XX New nucleic acid oligomers for amplifying a nucleotide sequence from HIV-

PT 1 and probes for detecting the amplified product are specific for gag and

XX pol regions and are useful to detect different subtypes of HIV-1.

XX Claim 1; Page 26; 37pp; English.

XX This invention relates to a series of nucleic acid oligomers for

CC amplifying and detecting a nucleotide sequence of human immunodeficiency

CC virus type 1 (HIV-1). The invention also comprises a labeled

CC oligonucleotide that specifically hybridizes to an HIV-1 sequence derived

CC from gag or pol sequences, having one of the sequences fully defined in

CC the specification, and a method for detecting HIV-1 in a biological

CC sample, comprising mixing the sample with two or more of the

CC amplification oligomers that specifically amplify at least one HIV-1

CC target sequence within gag and a pol sequence which is a protease or

CC reverse transcriptase sequence, amplifying the target, and detecting the

CC amplified product. The oligonucleotides of the invention may be used to

CC diagnose HIV-1 infection. The presents sequence represents a PCR primer

CC used to amplify the HIV-1 reverse transcriptase gene in the HIV detection

CC method of the invention. (Updated on 29-AUG-2003 to standardise OS field)

PS
XX
XX This invention relates to a series of nucleic acid oligomers for
CC amplifying and detecting a nucleotide sequence of human immunodeficiency
CC virus type 1 (HIV-1). The invention also comprises a labeled
CC oligonucleotide that specifically hybridizes to an HIV-1 sequence derived
CC from gag or pol sequences, having one of the sequences fully defined in
CC the specification, and a method for detecting HIV-1 in a biological
CC sample, comprising mixing the sample with two or more of the
CC amplification oligomers that specifically amplify at least one HIV-1
CC target sequence within gag and a pol sequence which is a protease or
CC reverse transcriptase sequence, amplifying the target, and detecting the
CC amplified product. The oligonucleotides of the invention may be used to
CC diagnose HIV-1 infection. The presents sequence represents a PCR primer
CC used to amplify the HIV-1 Gag gene in the HIV detection method of the
CC invention. (Updated on 29-AUG-2003 to standardise OS field)

PT Detecting prostate-specific antigen (PSA), prostate specific membrane
PT antigen (PSMA) or human kallikrein 2 (hk2) nucleic acids in samples using
PT probe molecules, useful for the diagnosis of prostate and breast cancers.
XX
XX Claim 1; Page 14; 77pp; English.
XX
CC The present invention is concerned with the detection of nucleic acid
CC markers for prostate and breast cancer, and PCR primers and probes which
CC are able to detect and quantify these markers. Prostate specific antigen
CC (PSA), prostate-specific membrane antigen (PSMA) and glandular kallikrein
CC -2 (hk2) have all been linked to prostate and breast cancers, and the
CC primers and probes of the invention are able to detect the abnormal
CC presence of mRNA expressed by their coding sequences in tissues other
CC than the prostate. This enables the presence of cancer to be perceived
CC and aids in the detection of metastases

Detecting Mycobacterium species, involves in vitro amplification of 16S
rRNA or DNA encoding RNA in nucleic acid amplification mixture using
specific primers, and detecting the amplified nucleic acid.
XX
Claim 1; Page 34; 44pp; English.
XX
The invention relates to a method of detecting Mycobacterium species,
that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
encoding 16S rRNA in an in vitro nucleic acid amplification mixture
comprising a polymerase, and at least two primers, and then detecting the
amplified nucleic acid. The method is relatively simple and useful for
detecting the presence of various Mycobacterium species in a biological
sample, and thus important for diagnosis of infections resulting from
them. The method is especially important for screening opportunistic
infections caused by M. tuberculosis or a Mycobacterium other than
tuberculosis (MOTT). The present sequence is a T7 promoter-primer used
for amplifying Mycobacterium 16S rRNA. (Updated on 11-SEP-2003 to

 XX New nucleic acid oligomers for amplifying a nucleotide sequence from HIV-
 PT 1 and probes for detecting the amplified product are specific for gag and
 PT pol regions and are useful to detect different subtypes of HIV-1.
 XX Claim 1; Page 25; 37pp; English.
 PS This invention relates to a series of nucleic acid oligomers for
 CC amplifying and detecting a nucleotide sequence of human immunodeficiency
 CC virus type 1 (HIV-1). The invention also comprises a labeled
 CC oligonucleotide that specifically hybridises to an HIV-1 sequence derived
 CC from gag or pol sequences, having one of the sequences fully defined in
 CC the specification, and a method for detecting HIV-1 in a biological
 CC sample, comprising mixing the sample with two or more of the
 CC amplification oligomers that specifically amplify at least one HIV-1
 CC target sequence within gag and a pol sequence which is a protease or
 CC reverse transcriptase sequence, amplifying the target, and detecting the
 CC amplified product. The oligonucleotides of the invention may be used to
 CC diagnose HIV-1 infection. The presents sequence represents a PCR primer
 CC used to amplify the HIV-1 protease gene in the HIV detection method of
 CC the invention. (Updated on 29-AUG-2003 to standardise OS field)

XX PT Detecting human immunodeficiency virus-2 nucleic acids in a sample, by
 PT amplifying nucleic acids with oligonucleotides and detecting nucleic
 PT acid, or hybridizing nucleic acid with a probe and detecting probe:target
 PT duplex.

XX PS Claim 11; Page 25; 58pp; English.

XX CC The invention relates to a method of detecting human immunodeficiency
 CC virus-2 nucleic acids (NA) in a biological sample, by contacting NAs with
 CC 1st and 2nd amplification oligonucleotides, amplifying HIV-2 nucleotide
 CC base sequence, and detecting the amplified NA; or providing a
 CC hybridisation probe and detectable label, hybridising HIV-2 NA with the
 CC probe to form probe:target duplex, and detecting the duplex. The method
 CC is useful for detecting the presence of HIV-2 NAs in a lysate or a blood
 CC product such as plasma or serum, and also for detecting subtypes A, B, C
 CC and D of HIV-2. The method is useful for amplifying and detecting the NA
 CC in blood serum and also as components of multiplex amplification
 CC reactions that synthesise amplicons corresponding to polynucleotides of
 CC unrelated viruses, e.g. HIV-1, hepatitis B virus (HBV) and hepatitis C
 CC virus (HCV). ABK93897-ABK93910 represent HIV-2 detection probes of the
 CC invention. (Updated on 29-AUG-2003 to standardise OS field)

XX PT New cell line transformed by a gene encoding an enzyme involved in drug
 PT metabolism and by gene encoding an enzyme involved in ammonia metabolism,
 PT useful in liver function supporting equipment for assessing liver
 PT function.

XX PS Example 3; Page 11; 22pp; Japanese.

XX CC The invention relates to a novel cell line (HepG2) transformed by a gene
 CC encoding an enzyme involved in drug metabolism, such as cytochrome P450
 CC 3A4 (CYP3A4) and a gene encoding an enzyme involved in ammonia
 CC metabolism, such as glutamine synthetase. The cell line of the invention
 CC provides a hybrid artificial liver and facilitates cell procurement, and
 CC thus may be useful in liver function studies. The current sequence is
 CC that of the human glutamine synthetase (GS) DNA fragment of the invention
 CC which was isolated from an expression vector.

XX New zinc finger proteins, useful for modulating or regulating gene
XX expression and metabolic pathways in plants, e.g. for treating in the
XX plant cells a disorder that is associated with abnormal expression of the
XX target gene.
XX Disclosure; Page 153-156; 156pp; English.
XX The patent discloses methods and compositions to modulate the expression
XX of a target gene in plant cells. The method involves providing plant
XX cells with a zinc finger protein (ZFP) which is capable of specifically
XX binding to a target nucleotide sequence or its complementary strand
XX within a target gene and allowing the ZFP binding to the target
XX nucleotide sequence, where the expression of the target gene in the plant
XX cells is modulated. The ZFP and fusions of the ZFP proteins are useful
XX for modulating or regulating gene expression and metabolic pathways in
XX plants. The ZFP, fusion proteins and methods are useful in plant and
XX agricultural technology. The method is useful particularly for treating a
XX disorder in the plant cells, where the disorder is associated with
XX abnormal expression of the target gene. The present sequence is six
XX finger ZFP (2C7)-Sin3 interaction domain (SID) DNA

XX Detecting Mycobacterium avium complex organisms, comprises using in vitro
XX nucleic acid amplification with amplification oligonucleotides specific
XX for 16S ribosomal RNA or DNA encoding 16S rRNA from the bacterial
XX species.
XX Disclosure; Page 26; 27pp; English.
XX The present invention relates to a method for detecting Mycobacterium
XX avium complex (MAC) organisms (eg. M. avium, M. intracellulare, M.
XX tuberculosis, M. paratuberculosis) present in a biological sample. The
XX method comprises amplifying a 16S ribosomal RNA (rRNA) or DNA encoding
XX 16S rRNA obtained from a biological sample containing nucleic acid from a
XX MAC species in an in vitro nucleic acid amplification mixture comprising
XX a polymerase activity and a pair of primers to produce an amplified
XX nucleic acid and detecting amplified nucleic acid. The method is useful
XX for in vitro diagnostic detection of pathogenic bacteria, particularly
XX detecting infections caused by MAC organisms, distinguished from other
XX closely-related Mycobacterium species. The present sequence is
XX Bacteriophage T7 promoter. This promoter along with a primer is used for
XX in vitro amplification of MAC rRNA. (Updated on 11-SEP-2003 to
XX standardise OS field)

CC 1st and 2nd amplification oligonucleotides, amplifying HIV-2 nucleotide
 CC base sequence, and detecting the amplified NA; or providing a
 CC hybridisation probe and detectable label, hybridising HIV-2 NA with the
 CC probe to form probe:target duplex, and detecting the duplex. The method
 CC is useful for detecting the presence of HIV-2 NAs in a lysate or a blood
 CC product, such as plasma or serum, and also for detecting subtypes A, B, C
 CC and D of HIV-2. The method is useful for amplifying and detecting the NA
 CC in blood serum and also as components of multiplex amplification
 CC reactions that synthesise amplicons corresponding to polynucleotides of
 CC unrelated viruses, e.g. HIV-1, hepatitis B virus (HBV) and hepatitis C
 CC virus (HCV). ABK93877-ABK93910 represent HIV-2 detection probes of the
 CC invention. (Updated on 29-AUG-2003 to standardise OS field)

XX PT New peptide acting on a membrane of a microorganism, for preventing
XX putrefaction of food or industrial products and treating an infectious

```

PT disease, cancer, autoimmune disorders, inflammation and graft versus host
 XX disease.

PS Example 6; SEQ ID NO 9; 58pp; English.

XX The invention relates to a peptide capable of specifically acting on a
 CC membrane of a microorganism or an animal cell having an abnormality. The
 CC peptide conforms to the formula given in claim 1 of the specification.
 CC Exemplary sequences appear as ADMI1859-ADMI1965 (SEQ ID 110-113 and 119
 CC are not indexed as being too short). Also included are a library
 CC comprising nucleic acid sequences (each nucleic acid sequence comprising
 CC (i) a first cassette comprising a base sequence encoding a first peptide,
 CC (ii) a second cassette comprising a base sequence encoding a second
 CC peptide, the base sequence having the same reading frame as that of the
 CC base sequence encoding the first peptide, where the second peptide and
 CC comprises a site allowing flexible movement of the first peptide and
 CC (iii) a third cassette comprising a base sequence essentially required
 CC for transcription and translation of the first and second cassette (e.g.
 CC a T7 promoter), the third cassette being operatively linked to the first
 CC and second cassette, where the number of the nucleic acid sequences in
 CC the library whose first cassettes are different from another is at least
 CC two), a vector comprising the library, a method for screening for a
 CC nucleic acid encoding a peptide capable of acting on biological membrane,
 CC a pharmaceutical composition for killing a microorganism (or preventing
 CC putrefaction of food or industrial products, for treating an infectious
 CC disease caused by a microorganism or a cancer and for suppressing
 CC apoptosis), comprising the peptide, an antibiotic comprising the peptide,
 CC a pharmaceutical delivery substance for delivering a drug to a site
 CC infected with a microorganism (or to a cancer lesion site or to a site
 CC undergoing apoptosis) comprising the peptide and a kit, for screening for
 CC a nucleic acid encoding a peptide capable of acting on a biological
 CC membrane. The peptides and compositions are useful in killing a
 CC microorganism, preventing putrefaction of food or industrial products,
 CC treating an infectious disease caused by a microorganism or a cancer,
 CC e.g. bladder, stomach, breast, lung, prostate, large intestine, uterine,
 CC ovarian or kidney cancer, glioblastoma, leukaemia, autoimmune disorders,
 CC viral infections, inflammation and graft versus host disease and in
 CC suppressing apoptosis. The present sequence is an RT-PCR (reverse
 CC transcriptase PCR) primer used to recover mRNA expressing a membrane
 CC interacting peptide of the invention.

XX Method of identifying polypeptide binding target molecules - uses an in

XX vitro translation system with formation of polysomes.

XX Example 8; Page 27; 47pp; English.

XX A method has been developed of identifying a nucleic acid encoding a
 CC (poly)peptide that interacts with a target molecule. The method
 CC comprises: (i) translating a population of mRNA molecules lacking stop
 CC codons, in the correct reading frame in an in vitro translation system,
 CC where the system either comprises antisense oligonucleotides
 CC complementary to the tag-coding sequence of ssrA-RNA or is free of ssrA-
 CC RNA so that formation of polysomes is allowed; (ii) contacting the formed
 CC polysomes with the target molecules so that the nascent (poly)peptide
 CC encoded by the RNA and produced by the polysome, binds the target
 CC molecule; (iii) separating polysomes where the nascent (poly)peptide
 CC produced by the polysome is bound to the target molecule from those
 CC polysomes not displaying novel (poly)peptides; and (iv) identifying the
 CC nucleic acid sequence encoding the (poly)peptide binding the target
 CC molecule. Optionally prior to the formation of polysomes, DNA molecules
 CC devoid of stop codons are transcribed in the presence of a reducing
 CC agent, either beta-mercaptoethanol or DTT, to produce the corresponding
 CC RNA molecules, and the reducing agent is then removed from the RNA
 CC molecules. The method is used to identify polypeptides that bind target
 CC molecules. The present sequence represents a PCR primer used in an
 CC example from the present invention for construction of a polysome display
 CC library

PT Producing linear DNA fragments for the in vitro expression of proteins,
PT comprises amplifying a linear DNA fragment containing control elements
PT and a protein-coding gene having two ends with complementary regions to
PT the linear DNA fragment.
XX
XX Example 1; Page 6; 26pp; English.
XX
CC The present invention relates to a method for producing linear DNA
CC fragments for the in vitro expression of proteins. The method comprises
CC amplifying a linear DNA fragment, which contains control elements and a
CC protein-coding gene having two ends with complementary regions to the two
CC ends of the linear DNA fragment, using a primer pair that binds upstream
CC and downstream of the expression control region on the linear DNA
CC fragment. The method is useful for producing a linear DNA fragment for
CC the in vitro expression of proteins. The linear DNA fragment is
CC particularly useful for the in vitro expression of a protein using a
CC lysate from bacterial strains or eukaryotic cells. The present sequence
CC is a PCR primer, which was used in an example from the invention

XX
XX Displaying/selecting protease molecule, by incubating mRNA to enable its
XX translation to form complexes of ribosome, mRNA and encoded nascent
XX peptide, contacting complexes with protease binding ligand, selecting
XX complexes bound to ligand.
XX
XX Example 2; Page 41; 72pp; English.
XX
XX The specification describes a method for displaying and selecting
XX protease molecules. The method comprises incubating mRNA molecules
XX encoding a peptide under conditions suitable for translation of mRNA
XX molecules to form complexes comprising ribosome, mRNA and encoded nascent
XX peptide displayed on ribosome; contacting complexes with a protease
XX binding ligand; and selecting complexes which specifically bind protease
XX
CC binding ligand. The method is useful for displaying and selecting a
CC protease molecule; identifying one or more protease from a tissue sample;
CC identifying a protease with particular substrate specificity; identifying
CC protease binding ligand; displaying, characterizing and/or identifying
CC protease and modulators of protease activity; identifying new proteases
CC from library of peptides; and characterizing one or more tissues or
CC groups of tissues with respect to protease activity. The present PCR
CC primer was used to add the T7 promoter to mRNA constructs for display of
CC cathepsin S.

XX
XX Identifying an open reading frame encoding toxic protein, involves
XX detecting gap in map of shotgun clones from shotgun library aligned on
XX target DNA sequence, corresponding to numerical deficiency in start sites
XX of shotgun clones.
XX
XX Example 1; SEQ ID NO 3; 34pp; English.
XX
XX This invention describes a novel method for identifying an open reading
XX frame encoding a toxic protein, which involves obtaining an in silico map
XX of several shotgun clones from a shotgun library aligned on target DNA
XX sequence, detecting a gap in the map corresponding to numerical
XX deficiency at the start sites of shotgun clones in a region such that
XX there is a statistically underrepresented number of clones spanning the
XX ORF, and determining whether the product of the ORF is a toxic protein.
XX The target DNA fragment is a genome chosen from a bacterial genome,
XX archaeal genome and viral genome. The toxic gene is mapped to an ORF
XX adjacent to a methylase. The step of identifying the gene expressing the
XX toxic protein from the ORF further involves expressing the ORF in vivo or
XX by in vitro translation. The method is useful for identifying ORF's
XX encoding toxic proteins e.g. restriction endonucleases and enables
XX efficient characterization of toxic genes. This sequence represents a T7
XX universal primer used with AEE96337 to identify the Methylococcus
XX capsulatus Mcal617 restriction endonuclease using the method of the
```

CC invention.

XX Expression vector library, especially a phage display library comprises several nucleic acid sequences whose expression is under regulatory control of T7 promoter and encode antibodies or their fragments.

PS Claim 4; Page 43; 54pp; English.

XX The present sequence is a T7 promoter sequence preferred for use in claimed expression vector libraries of the invention. These expression vector libraries, preferably phage display libraries, comprise nucleic acid sequences whose expression is under the regulatory control of a T7 promoter, and which encode antibodies or antibody fragments. The strong repression of the T7 promoter increases the possibility of finding larger variability in the pool of antibody fragments due to the low frequency of deletion of undesirable, to the bacterial host, gene fragments. The high efficiency of T7 RNA polymerase allows induction, by infection, at late stages of the cell cycle, increasing the number of host cells and limiting unwanted effects on the bacterial cells. XX Screening proteins or polypeptides by generating a gene library and synthesizing proteins - useful for direct selection of a biological phenotype.

XX Example 10; Page 69; 118pp; English.

XX This sequence corresponds to a PCR primer used to amplify a capture domain sequence used in a method of screening proteins or polypeptides, involving the generation of a gene library and the synthesis of proteins. The methods permit direct selection of a biological phenotype, involving contacting displayed proteins or polypeptides with target cells to enable binding to the cell. The resulting alteration in the target cell permits isolation of the cell and recovery of genes encoding the displayed protein or polypeptide. Binding also results in the production or cessation of production of molecules from the target cell, which also permits the recovery of genes encoding the displayed protein or polypeptide. Molecules produced are needed for cell survival when the cell is a microorganism (especially a bacteria or bacteriophage). Release of a molecule is needed for release of other molecules from liposomes. Alteration also results in appearance or disappearance of a cell surface marker on a cell

XX In vitro peptide and antibody display libraries for identifying multiple
PT binding specificities of single chain antibodies.

XX Example 1; Col 46; 50pp; English.

XX The specification describes a method for generating libraries of
CC polysomes displaying nascent peptides suitable for affinity interaction
CC screening. The method can be used to identify multiple binding
CC specificities of single chain antibodies, and comprises contacting
CC antigens with a polysome library displaying nascent peptides having a
CC single chain antibody segment, separating polysomes bound to the antigen
CC species from polysomes not bound to the antigen species, and synthesizing
CC cDNA from the separated bound polysomes to identify single chain
CC antibodies which bind to at least one of the antigen species present. The
CC method for generating libraries of polysomes displaying nascent peptides
CC is useful for affinity interaction screening. PCR primers AAX85760-61
CC were used in the course of the invention

XX New nucleic acid oligomers for amplifying a nucleotide sequence from HIV-
PT 1 and probes for detecting the amplified product are specific for gag and
PT pol regions and are useful to detect different subtypes of HIV-1.

XX Claim 1; Page 26; 37pp; English.

XX This invention relates to a series of nucleic acid oligomers for
CC amplifying and detecting a nucleotide sequence of human immunodeficiency
CC virus type 1 (HIV-1). The invention also comprises a labeled
CC oligonucleotide that specifically hybridizes to an HIV-1 sequence derived
CC from gag or pol sequences, having one of the sequences fully defined in
CC the specification, and a method for detecting HIV-1 in a biological
CC sample, comprising mixing the sample with two or more of the
CC amplification oligomers that specifically amplify at least one HIV-1
CC target sequence within gag and a pol sequence which is a protease or
CC reverse transcriptase sequence, amplifying the target, and detecting the
CC amplified product. The oligonucleotides of the invention may be used to
CC diagnose HIV-1 infection. The presents sequence represents a PCR primer
CC used to amplify the HIV-1 reverse transcriptase gene in the HIV detection
CC method of the invention. (Updated on 29-AUG-2003 to standardise OS field)

 XX Novel transgenic plants expressing therapeutically active proteins form
 PT their plastid genome, useful for producing allergens for vaccines.
 XX Example 30; Page 58; 99pp; English.

CC The present invention describes plants (I) comprising a DNA molecule (II)
 CC encoding a protein that is therapeutically active when administered to a
 CC host, in its plastid genome. The transgenic plants are used to express
 CC therapeutically active proteins, such as antigens, allergens, and
 CC autoantigens. The therapeutically active proteins are used to treat or
 CC prevent diseases, e.g. allergies, autoimmune diseases or transplant
 CC rejection. The invention allows the production of large and inexpensive
 CC supplies of protein-based medications. The plants are able to express
 CC large amounts of proteins in a cost effective manner, and, as the
 CC proteins are packaged in plastids, they can be isolated easily. The
 CC present sequence represents an oligonucleotide used in the construction
 CC of plant plastids which express the human BPI gene, which is used in an
 CC example from the present invention. (Updated on 06-AUG-2003 to correct OS
 CC field.)

 PT Novel transgenic plants expressing therapeutically active proteins form
 PT their plasmid genome, useful for producing allergens for vaccines.
 XX
 PS Example 30; Page 58; 99pp; English.
 XX
 CC The present invention describes plants (I) comprising a DNA molecule (II)
 CC encoding a protein that is therapeutically active when administered to a
 CC host, in its plasmid genome. The transgenic plants are used to express
 CC therapeutically active proteins, such as antigens, allergens, and
 CC autoantigens. The therapeutically active proteins are used to treat or
 CC prevent diseases, e.g. allergies, autoimmune diseases or transplant
 CC rejection. The invention allows the production of large and inexpensive
 CC supplies of protein-based medications. The plants are able to express
 CC large amounts of proteins in a cost effective manner, and, as the
 CC proteins are packaged in plasmids, they can be isolated easily. The
 CC present sequence represents an oligonucleotide used in the construction
 CC of plant plasmids which express the human BPI gene, which is used in an
 CC example from the present invention. (Updated on 06-AUG-2003 to correct OS
 CC field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sequence is the direct result of the Base calling software
Phred (default parameters). It is the raw base calls. To aid in the
identification of the high quality insert the software Lucy
(default parameters) has been run on this sequence. Lucy identified
the region [95,663].

/clone_lib="Triticum aestivum FGAS: Library 2 Gate 3"
/note="Organ: Crown and leaf; Vector: pCMV.SPORT6; Aerial
parts (crown and leaf) of wheat cultivar Norstar from
control and long exposure times to low temperature. 4 mRNA
populations were combined before constructing the library;
7 days non-acclimated plants and 1, 23, and 53 days
cold-acclimated at 4C. Non-acclimated and cold-acclimated
plants were grown in vermiculite This is the only library
that was done according to the Invitrogen manual, and
therefore, a percentage of clones will not have the 3
prime end because of NotI digestion within the cDNA."

This sequence is the direct result of the Base calling software
Phred (default parameters). It is the raw base calls. To aid in the
identification of the high quality insert the software Lucy
(default parameters) has been run on this sequence. Lucy identified
the region [102,627].

/notes="Organ: Root; Vector: pCMV.SPORT6; Root tissue from
control, cold-acclimated and salt stressed wheat cultivar
Norstar. 7 mRNA populations were combined before
constructing the library; 7 day non-acclimated roots, 1,
23, and 53 days cold-acclimated at 4C, and 30 minutes, 3
hours and 6 hours treated roots with 200mM NaCl.
Non-acclimated and cold-acclimated plants were grown in
vermiculite while salt stressed plant were grown
hydroponically. First strand synthesis in this library was
done in the presence of methylated dCTP thereby protecting
from internal cleavage with NotI."

            The sequence contained an oligo-dT track that was present in the
            oligonucleotide that was used to prime the synthesis of first
            strand cDNA and therefore this may represent a bonafide poly A
            tail. The sequence tag present in the cDNA between the NotI site
            and the oligo-dT track served to verify it as a clone from the
            hippocampus tissue cDNA library preparation: M.B. Soares Lab Clone
            distribution: Researchers may obtain BMAP cDNA clones from RESEARCH
            GENETICS. It should be noted that Bento Soares is generating a
            small number of additional specialized non-redundant arrays of BMAP
            cDNAs whose availability will be considered under appropriate and
            limited collaborative arrangements
            Seq primer: M13 Forward
            PolyA=yes.

               DNA is from a doubled haploid provided by Tom Osborn.
               Seq primer: TF
               Class: sheared ends.
               Location/Qualifiers

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 88
DQ154566 499 bp DNA linear ENV 27-AUG-2005
LOCUS Uncultured soil bacterium clone RFS-C252 16S ribosomal RNA gene,
DEFINITION partial sequence.
ACCESSION DQ154566
VERSION DQ154566.1 GI:73672356
KEYWORDS ENV.
SOURCE uncultured soil bacterium
ORGANISM uncultured soil bacterium
REFERENCE 1 (bases 1 to 499)
AUTHORS Becker,J.M., Nakatsu,C.H., Turco,R.F. and Konopka,A.
TITLE Low nutrient fluxes result in high cultivation efficiencies of soil
JOURNAL Unpublished
REFERENCE 2 (bases 1 to 499)
AUTHORS Becker,J.M., Nakatsu,C.H., Turco,R.F. and Konopka,A.
TITLE Direct Submission
JOURNAL Submitted (04-AUG-2005) Biological Sciences, Purdue University, 915
WEST State Street, West Lafayette, IN 47907-2054, USA
FEATURES
source
1. 499
/organism="uncultured soil bacterium"
/mol_type="genomic DNA"
/isolation_source="Ross Forest soil"
/db_xref="taxon:164851"
/clone="RFS-C252"
/environmental_sample
<1..>499
/product="16S ribosomal RNA"
